DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Feesler (US 6,343,550).

Regarding claim 1, Feesler discloses "a flexographic printing plate (Figure 3) including a raised part (item 40) for transferring a printing substance to a printing substrate, said raised part having a top surface and a side (see the top surface and c, and said top surface and said side forming an angle of not less than 90° and not more than 105° (column 4, lines 13-15)."

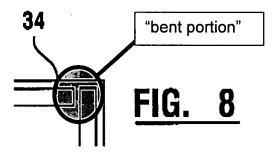

The phrase "wherein the printing substance is transferred to the printing substrate by the raised part contacting the printing substrate" is functional language and does not patentably distinguish over Feesler.

Regarding claim 2, Feesler further discloses "wherein said angle is not less than 95° and not more than 100° (column 4, lines 13-15)."

Regarding claim 3, Feesler further discloses "wherein said top surface is shaped as a line when viewed from above (figures 6-8), and has a bent portion (figure 8; see portion of image below for how Examiner interprets the term 'bent portion')."

Application/Control Number: 10/532,166

Art Unit: 2854

Regarding claim 4, Feesler further discloses "a flexographic printer (figure 4) including the flexographic printing plate according to claim 1 (figure 4)."

Regarding claim 5, Feesler further discloses "a method of producing a printed substance, wherein printing is performed using the flexographic printing plate according to claim 1 (operation of Figure 5)."

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Feesler, as applied to claim 5 above, in view of Chen et al. (US 2004/0099389).

Regarding claim 6, Feesler discloses all that is claimed, but fails to mention either the type of printing substance or the viscosity of the printing substance used in the printing. Chen et al. teach "using a printing substance with a viscosity of not less

Page 4

than 40 Pa·s" in order to print on textiles or absorbent webs (paragraph 15). Therefore, at the time of the invention, it would have been obvious to one having ordinary skill in the art to use a higher viscosity printing substance in the method of Feesler in order to print on textiles.

Response to Arguments

- 3. Applicants' arguments filed 7/30/07 have been fully considered but they are not persuasive.
- 4. In response to applicants' argument that the ridge of Feesler does not transfer ink to the substrate, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Application/Control Number: 10/532,166

Art Unit: 2854

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joshua D. Zimmerman whose telephone number is 571-

272-2749. The examiner can normally be reached on M-R 8:30A - 6:00P, Alternate

Fridays 8:30A-5:00P.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Judy Nguyen can be reached on 571-272-2258. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
